

As many water-sports fans will know, the existing fixing systems on boats all use pins which protrude from the deck. Not only are they a big source of irritation when they snag your ropes or rip your clothing, but they can be dangerous, too, as anyone who's ever stubbed a toe or tripped over one can testify.

Attaching marine covers with this type of pin system is also a fiddly business, especially in cold, wet conditions ... which is exactly when you need that cover secured, and fast. On top of that, the winter check-up regularly reveals that half the connectors are damaged and need replacing.

Solved!

More than enough reasons to solve your problems once and for all: **PERFIX®**.

PERFIX International B.V.

next generation fasteners

Looks familiar?

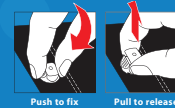

No sharp pins on deck

PERFIX® does not involve protruding pins, sharp parts or other hazardous obstacles on deck. PERFIX® has smooth, round fixing points which prevent injury, cloth damage or snagged ropes and cords.

Perfect fixing grip and easy release under all conditions.

A special grip design means that you can easily attach PERFIX® to the fixing points: simply press the two together and the PERFIX® clicks when it's secure. Even with cold and wet fingers, the marine covers can be easily released from the PERFIX® fixing points, thanks to the perfect grip of the lifting head.

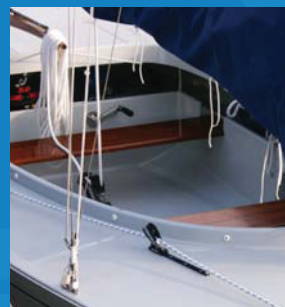

Durable and corrosion free

Each individual part of PERFIX® is made of the highest quality plastic and the spring is made of the best stainless steel, so PERFIX® doesn't contain fragile parts.

Problem-free switch-over to PERFIX®

PERFIX® can easily replace most other fasteners using the existing holes on both deck and cover. With the handy tool provided, you can remove the old fasteners and replace them with PERFIX®... it's as simple as that!

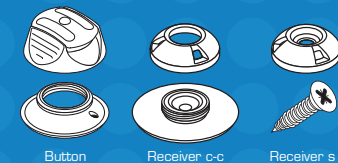

PERFIX® combines the separate steps of hooking and securing in just one simple move. The result is a unique connection, which can be fixed and released as easily as a press-stud. But it won't pop loose!

The applications are numerous: PERFIX® can provide the ideal solution for securing luggage, floor-mats in cars, to name but a few possibilities. Primarily, PERFIX® was developed to attach marine covers and spray hoods on boats. PERFIX® is patent pending.

The materials used make it possible to offer PERFIX® in a variety of colours. At present, PERFIX® is available in the two colours: Sparkling White and Captain Blue. Other suggestions are welcome.

In addition, PERFIX® is also available in a cloth-to-cloth version whereby the receiver is also fixed on a cover instead of on the deck. This version is offered in the same selection of colours. The development of different versions takes place in close collaboration with the customer.

For the installation of PERFIX® several tools are developed in close dialogue with customers.
